Instruction Manual Automatic Selector Unit

INTRODUCTION

This manual contains operating instructions and maintenance schedules for the

**Automatic Selector Units
P/N 82116 and P/N 82117**

All instructions should be observed and carried out in the order laid down to prevent damage and premature wear to the equipment.

While every effort is made to ensure the accuracy of the particulars contained in this manual, the manufacturing company will not, under any circumstances, be held liable for any inaccuracies or the consequences thereof.

Instruction Manual Automatic Selector Unit

1. GENERAL

Purpose

The automatic selector units are used to facilitate and accelerate the filling of compressed air bottles. This is performed by:

- Filling the air bottles to operating pressure with compressed air directly from the compressor without pressurizing the storage reservoirs.
- Filling the reservoirs to storage pressure for the next filling procedure.
- Filling the air bottles by overflow from the storage reservoirs, until pressure balance is achieved.

Description

The automatic selector unit is mounted externally, i.e. interconnecting lines must be laid between compressor and selector unit, between filling panel and selector unit, as well as between storage reservoirs and selector unit.

The tube diameter to be used is 10 mm.

The automatic selector unit operates pneumatically:

When the air bottles at the filling panel are filled and the adjusted pressure is reached, the pressure maintaining valve opens and leads the air coming from the compressor into the storage reservoirs.

The non-return valve permits the overflow of the compressed air from the storage reservoirs to the air bottles at the filling panels and assures that the air flows through the selector unit only in the predetermined direction.

The pressure switch/pressure sensor starts and shuts off the compressor depending on the storage reservoirs.

The two pressure gauges show the filling pressure and the storage pressure.

Technical data

Operating pressure P/N 82116 max. 350 bar

Operating pressure P/N 82117 max. 420 bar

Flow rate at:

$\Delta P = 50$ bar: 2,750 l/min.

$\Delta P = 200$ bar: 3,500 l/min.

$\Delta P = 300$ bar: 3,700 l/min.

Pressure gauge range P/N 82116: 0 to 400 bar

Pressure gauge range P/N 82117: 0 to 600 bar

Inlet/outlet connections 10 mm
(tube dia. O.D.)

Preparation for operation

Before taking the selector unit into operation observe the following:

- Check whether the operating pressure of the compressor corresponds with the pressure setting of the selector unit and the permissible pressure of the air bottles and the storage reservoirs.
- Do not attach air bottles unless rated for the approved pressure (note pressure stamped on air bottle neck).
- Check tightness of all tubes and connections.

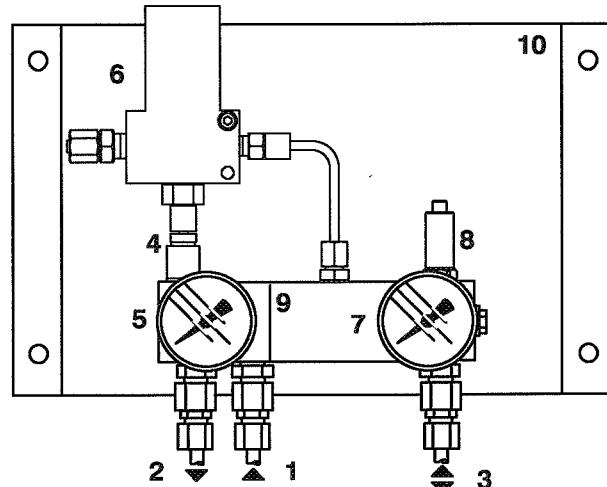

Fig. 2 Automatic selector unit 420 bar

Instruction Manual Automatic Selector Unit

Operation

- Connect the compressed air bottles to the filling valves on the filling panel.
- Set the filling valve handles to filling position.
- Open the bottle valves.
- Switch on compressor - bottles will be filled.
- To remove the air bottles, first close the bottle valves and the filling valves.

When the compressed air bottles connected to the filling panel are filled and the adjusted service pressure is reached, pressure maintaining valve (5) will open and the air flows from the compressor into the storage reservoirs.

When the reservoirs are filled and the maximum operating pressure is obtained, pressure sensor (6) shuts off the compressor.

When having to fill compressed air bottles through the filling panel again, the air will at first flow from the storage reservoirs through non-return valve (2) into the bottles until pressure is balanced and the pressure in the storage reservoirs decreases to the value adjusted on pressure sensor (6). The compressor will start running again and deliver the compressed air to the bottles, in the way described before.

Instruction Manual Automatic Selector Unit

2. OPERATION, ADJUSTMENTS

Pressure sensor

The pressure sensor setting is controlled by the B-Control Compressor control system. For instructions refer to the compressor unit instruction manual, chapter "Electrical system".

Pressure maintaining valve

To adjust the opening pressure of the pressure maintaining valve for delivery of the compressed air into the storage reservoirs, switch on compressor and adjust the pressure maintaining valve until the needle indicates the filling pressure on the scale of pressure gauge (5, Fig. 1).

To adjust the valve, loosen jam nut (2, Fig. 6) and set screw (3). Adjust screw (1) to the required pressure using a suitable screwdriver.

Clockwise = increases pressure

Counter-clockwise = decreases pressure

Compressors up to 420 bar

For adjustment of this valve see Fig. 7.

Non-return valve

The non-return valve permits the overflow of compressed air from the storage reservoirs into the air bottles connected to the filling panel.

It also assures that the air flows through the selector unit only in the pre-determined direction.

Pressure gauges

Pressure gauge (5, Fig. 1) shows the filling pressure and is also used for adjusting the pressure maintaining valve.

Pressure gauge (7) shows the storage pressure.

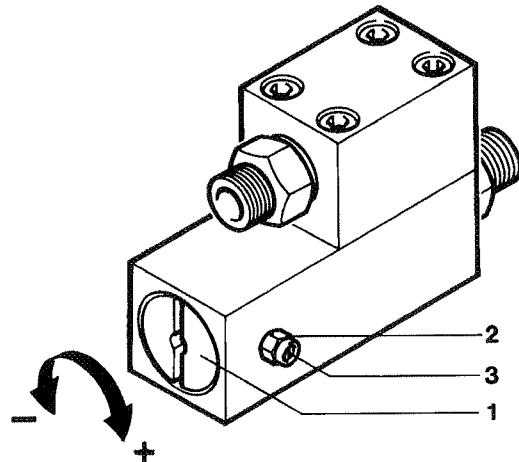

Fig. 6 Pressure maintaining/non-return valve 350 bar

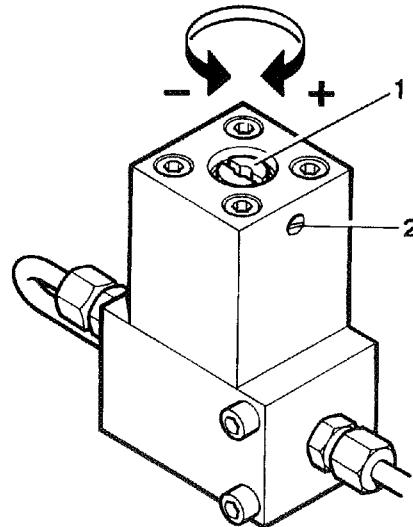

Fig. 7 Pressure maintaining/non-return valve 420 bar

3. SAFETY REGULATIONS

WARNING

Never open filling valves or shut-off valves when under pressure and not connected as highly compressed air emerging can cause serious accidents.

WARNING

Always shut down and decompress the complete system prior to carrying out any work on the compressor.

WARNING

Check the complete system for leakage from time to time by brushing all fittings and couplings with soapy water or spraying with leak test spray. Repair any leakage.

WARNING

Never repair pressure lines by soldering or welding.

4. MAINTENANCE

- Clean the outside of the unit from time to time.
- Check the pressure gauges from time to time. For this purpose we provide a special test pressure gauge with adapter to immediately recognize any deviation in indication. Slight deviations may be ignored. Excessive inaccuracies will require the pressure gauges to be readjusted or sent back for repair.

5. TROUBLE-SHOOTING

Trouble	Cause	Remedy
Compressor does not start	Pressure switch adjustment	Readjust (see chapter 2) or replace if necessary
No filling of storage reservoirs	Pressure maintaining valve adjustment	Readjust (see chapter 2) or replace if necessary
No filling of air bottles connected to the filling panel	Pressure maintaining valve maladjusted or defective	Readjust (see chapter 2) or replace if necessary
Storage reservoirs are filled simultaneously with air bottles	Non-return valve defective	Replace

Wichtige Hinweise für Teilebestellung:

Bestell-Nr., die mit der Ziffer 0 beginnen, bezeichnen Baugruppen, die komplett geliefert werden. Teile ohne Bestell-Nr. sind nur zur Information für die Montage aufgeführt. Sie sind nicht als Ersatzteil erhältlich. Bei Ersatzteilbestellungen erwarten Sie unsere richtige Lieferung; deshalb benötigen wir von Ihnen folgende Angaben (siehe unten gezeigtes Typenschild):

1. Modellbezeichnung, Fabrik.-Nr. sowie Fertigungsstand von Anlage/Block
2. Stückzahlen
3. Benennung und Best.-Nr. des gewünschten Teils

Bestell-Beispiel:

Für Kompressorblock ...
Fabrik.-Nr. 524-0528/1/2 drei Dichtungen
8263-090

Important notes for spare parts orders:

Part nos. beginning with digit 0 indicate parts available as complete assemblies. Parts without part no. are indicated for assembly reference, only. These parts are not available as single parts. When placing an order for spare parts, please give the following items so as to ensure our correct delivery (see identification plate shown below):

1. Model, serial no. as well as design standard of unit/block
2. Quantity required
3. Name and part no.

Example for order:

For compressor block ...
serial no. 524-0528/1/2, three gaskets
8263-090

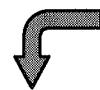

Avis important pour la commande de pièces:

Les nos. de commande commençant par le chiffre 0 indiquent les pièces livrées au complet. Les pièces sans no. de commande sont indiquées uniquement pour information de montage. Elles ne sont pas livrées individuellement. Pour que la livraison de pièces de rechange corresponde à la commande, veuillez bien nous fournir les données suivantes (voir plaque d'identité ci-dessous):

1. Modèle, no. de série et version du bloc compresseur/groupe
2. Quantité désirée
3. Désignation et no. de commande de la pièce désirée

Exemple de commande:

Pour bloc compresseur ...
no. de série 524-0528/1/2, trois joints no.
de cde. 8263-090

ACHTUNG

Nur Schrauben und Stiftschrauben der Qualität 8.8 verwenden!

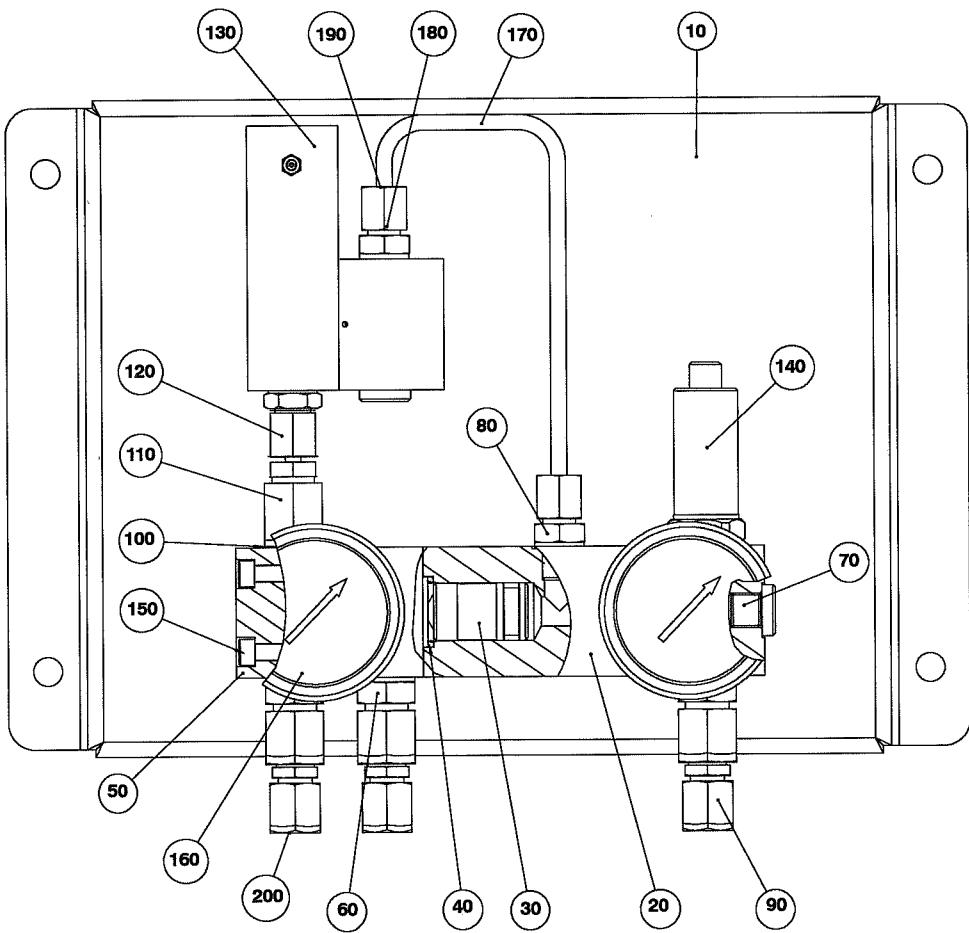

ATTENTION

Use only screws and studs in quality 8.8! This quality is equivalent to SAE J 429 d grade 5.

ATTENTION

N'utiliser que des vis et des goujons filetés de la qualité 8.8!
